Message from a man who lives underground Antarctica

Written in July 2025

Updated

Hello fellow Earthlings,

My name is Empolina and I'm 2000 years old. I live under Antarctica, in a city called Taygenta. There are 5 cities under Antarctica: Taygenta, Agartha, Pomelina, Taygana and Pomelyana. Inhabitants of these cities are all humans, some giants as you call them. Once we all lived in Hollow Earth peacefully but 2 million years ago we were invaded and driven out by entities you call Elohim, Nephilim and Annunaki. Today we know that these entities were tools of groups who wanted to submit population on and inside Earth under their control. One of their control systems is called Black Sun. It is a technological system which is intended to suck away soul energy of sacrificed victims. It was set up right after they drove us out and settled in Hollow Earth. Today they live in human bodies but are soulless. Their main purpose is guarding Black Sun systems. Black Sun as you call it, is located inside a Sun which is in Hollow Earth.

The reason I am writing this letter to population on Earth surface, is because I want to make clear that most systems which have enslaved you and us on planet Earth, come from within the Earth. From inner Earth, from Hollow Earth and not from skies above. The core of Earth population enslaving systems is located in Hollow Earth.

I would like to apologise for the harm the systems have done which go through our cities to drain surface people of their energy. Unfortunately we were forced into this situation by invaders into Hollow Earth 2 million years ago. We have acknowledged the situation and are in the process of dismantling the soul energy sucking systems.

I know not much is known about Antarctica among surface people or knowledge is kept secret from regular people. So I would like to introduce to you Antarctica as I know it.

After we were driven out from Hollow Earth, we moved to underground of Antarctica. All 5 cities were built into caverns.

City of Pomelina is the largest out of 5. The population is about 1 500 000. In the city there is a 500 m high waterfall which falls towards Hollow Earth. Around the city there are high buildings which resemble old world buildings on the surface. And these buildings are covered in ice. City life takes place inside the circle of these buildings. After we were driven out of Hollow Earth, Pomelina city was only one through which we could get raw materials from deeper inside Earth. Now all the other cities have also access to raw materials from deeper inside Earth. But to this day Pomelina city is the only one which has access to Hollow Earth.

City of Pomelyana is smaller than Pomelina. It's population is about 924 000. Main activity in Pomelyana is tied to finding and excavating rare earth minerals. In ancient times the city was used to traffic adult humans and human children, narcotics, alcohol beverages, soul fragments, technology and specific types of food which was needed for

entities living and working underground Earth. It was an intergalactic trading station. Today all the trafficking has been stopped.

City of Taygenta is a city which was visited by person from surface called Richard E. Byrd. It's population is about 700 000. It is a city with very lush wild nature. There live many wild animals which are extinct on the surface and the ones which have never lived on surface. We have many wild nature biologists studying them and working with them. In Taygenta, we have 40 different types of wolves, 20 different types of birds. We have ants which are 2 times the size of ants from the surface. The largest beetle we have is 122 cm (4 feet) long.

City of Taygana is technologically very advanced city. It is connected to a city which is under North Pole called Teyamata. Population in Taygana is about 500 000. Teyamata population is also about 500 000. Teyamata is also technologically advanced city. These cities are connected with a tube, inside the tube are housed systems which are connected to and control a system which you call „Internet of things". „Internet of things" system is very old. It's an ancient system, it was installed about 2 million years ago. I have come to understand that it was brought here by Nephilims who were parasitic in nature. The system housed in the tube is meant to control and manage Earth population.

City of Agartha is known to you, surface people. Currently it is almost abandoned. Population is 100 000 and decreasing. In ancient times it was a very busy city. It's main purpose was to bring to Earth programmed entities. The scheme or plan was to program surface people and the ones who accepted these programs - their energy was made available to be used and utilised by groups behind the programmed entities. You, surface people, called them gods, wisemen and worshipped them like they „knew it all". But they were merely tools in the hands of parasitic entities.

All 5 cities get power from Sun in Hollow Earth. The Sun is located in the sky of Hollow Earth.
